

SF₆ Cylinder Weighing System

K091R37

Portable, Simple, and Accurate Single-Cylinder Weight Scale

- Resolution: 0.1 lbs.
- Accuracy +/- 0.1 lbs.
- Small, lightweight and stable
- Battery operated
- Digital display with upper setpoints
- Safe, unsupervised operation.

Range:	0 –330 lbs.	Length:	15 “
Voltage:	120/220VAC	Width:	17”
Setpoint:	Variable	Height:	31”
		Weight:	44 lb

Description

The **K091R37** is designed to allow SF₆ users to accurately document gas transfer either to or from cylinders.

Too often, pressure is used to determine when a bottle is empty. This can be very misleading, accounting for significant volumes of gas unknowingly being sent back to the supplier. With the K091R37, users turn it on, roll a cylinder on to the weighing platform, and take a reading. The display is fully user-calibratable, and allows any unit of measurement.

Due to the low profile of the scale platform, it is no longer necessary to lift the cylinder on to the scale. The operator simply tilts the bottle back, and rolls it onto the platform. The scale surface is <1” higher than the ground.
